H. Erik Kleiman

Full-Stack Software Engineer | San Diego, CA | Open to remote

hekleiman@gmail.com | github.com/Hekleiman | linkedin.com/in/henry-erik-kleiman | hekdev.com

SUMMARY

Full-stack engineer working in TypeScript and React, with Node and Express APIs on PostgreSQL and MongoDB, a React Native app on TestFlight, and a published Chrome extension that talks to three vendors' internal APIs. Builds daily with Claude Code from written specs with acceptance criteria, and checks each change against tests and the running app before it ships. Co-founded a two-person product studio. Live portfolio at hekdev.com.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, Python (working knowledge), HTML5, CSS3

Front End & Mobile: React, Next.js, Astro, Tailwind, React Native (Expo), Chrome extensions (MV3)

Back End & Data: Node.js, Express, REST APIs, OAuth 2.0, PostgreSQL, Supabase (Realtime, edge functions), MongoDB, Zod

AI-Assisted Development: Claude Code (daily driver), written specs, OpenAI/Anthropic APIs, GPT-4o vision, schema-validated output

Testing & Delivery: Jest, Vitest, Playwright, GitHub Actions CI, Git and GitHub, Vercel, Supabase, Docker (light)

EXPERIENCE

HEK Designs LLC, Product Engineering Studio | Software Engineer & Co-Founder 2025 - Present

- Sole engineer at the studio: scope each build with the designer, choose the stack (Next.js, Astro, Sanity), implement the Figma designs, deploy on Vercel and support the sites after launch.
- Shipped a medical practice's Next.js site, architected to keep patient data off the marketing site entirely (every patient workflow hands off to athenaOne), with a role-based staff portal for editing content without a developer.
- Built the nonprofit's 40-page Astro and Sanity site: the client publishes in the CMS and a webhook rebuilds the site in under a minute, with Stripe Payment Links for merch, Givebutter donations, Formspree forms and Mailchimp.
- Added CI quality gates to client repos (structural tests over the nonprofit's built output, Vitest on the medical site) and a local visual-QA tool where Playwright captures each page and Claude Vision critiques it against the Figma export.

DevSum, Git Diff Analyzer (Open Source) | Software Engineer 2025

- On a four-person open-source team, built the Express AI service that categorizes commits, writes daily summaries and task suggestions with OpenAI, and suggests commit messages from diffs; designed the MongoDB models and caching layer so repeated views do not re-bill OpenAI.
- Added failure handling and a script-based test harness, paired with a teammate on the GitHub OAuth 2.0 flow, and reviewed and merged a dozen teammates' pull requests.

PROJECTS

Trade-Up, Cross-Platform Mobile Marketplace *React Native, Expo, TypeScript, Supabase*

- Lead engineer on a React Native marketplace for cash-and-trade offers: real-time messaging on Supabase Realtime through one channel manager that dedupes channels and reconnects after background pauses, QR trade finalization with a server-side PIN check, biometric auth, and a Zod-validated natural-language search parser; 2,779 Jest cases, on TestFlight, pre-launch.

PortSmith, AI Assistant Migration Extension *TypeScript, Chrome MV3 | Chrome Web Store*

- Published a Chrome extension that moves Custom GPTs, Projects and Gems between ChatGPT, Claude and Gemini: mapped each platform's internal web API from network traffic, translates through one interchange schema, and checkpoints idempotent writes so an interrupted migration resumes without duplicates; no backend, no analytics, 583 tests (v0.4.0).

Parlour, Vinyl Turntable Simulator for macOS *Swift, SwiftUI, Core Audio | parlourhifi.com*

- Shipped a Mac app that plays Spotify, Apple Music and Now Playing audio through a simulated turntable: captures the music app's output with a Core Audio process tap, runs a real-time DSP chain (RIAA filtering, wow, needle drop, surface noise) tuned against real LP recordings, and syncs the tonearm with the player; notarized, self-updating, 431 tests (v0.7.5).

EDUCATION

Advanced Residency in Software Engineering, Codesmith

B.S., Applied Management, Grand Canyon University

Fluent in Spanish.
